- › Enables Managers & Supervisors to identify risk and compliance gaps at all organisational levels.
- › Provides role-based training to fill skill gaps and improve competency levels in the field.

AI Risk Management across the enterprise

- › By ensuring best practice is actively employed, any failure to use best practice exposes risk.
- › Encourages active use of best practice, changes cultures and drives performance improvement
- › AI prediction of where the next loss incident is likely to be and fixes the problem before it occurs by deploying the right best practice and ensuring it gets done.

KEY FEATURES:

- › Any language
- › Evidence capture
- › Risk Reporting
- › Expiration alerts
- › Any device
- › Digital sign-off
- › Report Generator
- › Access permissions
- › Online / Offline
- › Dual Review
- › Geolocation
- › Cyber secure

Trusted by the world's second largest food & drinks company

Case Study:

Increased Onboarding Efficiency by 80% with Benchmax

Challenge: Maintaining operations during COVID-19

- › For a multinational corporation, maintaining standards across operations is vital. During Covid-19 up to 45% of trained staff found themselves needing to shield, self-isolate or recover from COVID-19.
- › This resulted in a need to recruit new staff, whilst ensuring compliance with best practices with minimal interruption to the flow of production.
- › To maintain consistency and quality of product, a critical demand emerged. They needed to ensure existing product standards were met. This included verifying that all new personnel were using the right best practice. That they weren't only trained but also validated to the company's exacting requirements before taking place on the factory production lines.

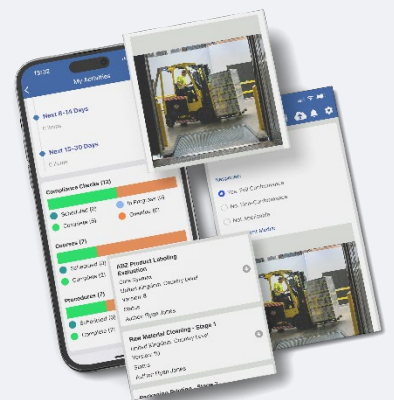

Company snapshot

- › The second-biggest food manufacturer globally
- › Sells in 200 countries. Over 100 product lines. Revenue: \$65 billion+
- › 267,000+ employees
- › As of 2023, our system is being used across 11 of the company's operational countries, with nearly 8,000 users.

Solution: They reduced onboarding time by over 80%

- › With procedures broken down into a series of verifiable steps, the supervisors were able to quickly assess and verify the capability of line workers, both on site and remotely.
- › Their workers were able to read and sign off understanding of all required SOPs, SWPs and key technical documentation, applicable to their roles.
- › As a result, the company reduced the time for people to be verified as trained, safe and capable from 10 weeks to two.
- › Reducing their upskilling time by 80% enabled the production lines to keep operating at peak efficiency during the most demanding period in the history of the plants.
- › They now benefit from an uninterrupted flow of compliance and competency throughout their global workforce. Continually able to re-evaluate and schedule new assessments as needed.
- › Learning in China passed on globally using videos of machine maintenance.

Compliance Management with Benchmax

“Provided structure, acceleration and visibility of new person onboarding that we have never had before.”
